

## ■Pattern AI-uditor v0.1.0 - How to install on your Android phone

You were sent a link, not a file. That's the point.

Clicking the link on your phone is the whole install.

### THE LINK

<https://github.com/truthprojectofficial-max/pattern-auditor/releases/download/v0.1.0/Pattern-AI-uditor-v0.1.0.apk>

### WHAT IT IS

An Android app called "Pattern AI-uditor". It is a local-only text scanner. It runs entirely on your phone. It does not connect to the internet. It does not collect, send, or store anything.

It contains 71 lexical patterns (DD-001..DD-071) and tells you which ones match a piece of text you give it. That is the whole product. No ads, no analytics, no account, no in-app purchases.

### INSTALL - ON YOUR PHONE

1. Open this link on your Android phone:

<https://github.com/truthprojectofficial-max/pattern-auditor/releases/download/v0.1.0/Pattern-AI-uditor-v0.1.0.apk>

2. Chrome will say "this type of file can harm your device".

That is a generic Android warning for any APK downloaded from the web. Tap "Download anyway" / "Keep". The file is signed by the developer and the SHA-256 hash matches the one published on the GitHub release page (d2f603b8...d92268e).

3. When the download finishes, swipe down from the top of the screen and tap the downloaded file. Or open the Files app and tap it there.

4. Android will say "For your security, your phone is not allowed to install unknown apps from this source." Tap "Settings", then turn ON "Allow from this source" for Chrome (or whichever app you used). This permission is per-app and per-download - you are only allowing Chrome to install this one APK, not anything else in the future.

5. Go back. Tap "Install". Wait ~3 seconds.

6. Tap "Open". You are in.

## USING IT

- Type or paste up to 50,000 characters into the text box.

Tap SCAN. Read the result cards.

- OR: in any app, select text, tap Share, pick "Pattern AI-uditor" from the share sheet. The text lands in the box and the scan runs automatically.

## WHAT THE RESULT MEANS

Each match is a card showing:

- the pattern ID and name (e.g. DD-001 - Facade of Competence)
- the exact phrase from your text that triggered the match
- the indicator (the keyword/phrase the pattern looks for)
- the rule explanation
- the ruleset version

What the result does NOT mean:

- It does not mean the text is a lie.
- It does not mean the writer is deceitful.
- It does not measure truth, intent, or diagnosis.
- "No configured pattern detected" does not mean the text is honest. It just means none of the 71 lexical indicators fired.

## IF SOMETHING GOES WRONG

- App won't install: the file may be incomplete. Re-download from the link above. If Chrome's "Open after download" jumped straight to installer, the file is ~5.7 MB; if yours is smaller, the download was cut off.

- App crashes on launch: take a screenshot. Send it to the person who sent you the link. The developer will fix it.

- App says "Nothing to scan": the share didn't carry text.

Try a different app, or copy the text and paste it into

the field.

## UNINSTALL

Long-press the app icon -> App info -> Uninstall.

This removes the app. Nothing is left on your phone; nothing was sent anywhere.

VERIFICATION (optional, for the curious)

- GitHub release page:

<https://github.com/truthprojectofficial-max/pattern-auditor/releases/tag/v0.1.0>

- Full source:
